Go Fish Gone Wild!

1. Deal each player seven cards. Place the rest in the middle as the "Go Fish Pile".

**2. Once they cards are divided, put in front of you any matches you already have. (For example, you got two pelicans. They form a match. Place them face up in front of you.)**

3. Now, the first player will ask another player if they have animal will a certain type of structure (fangs, beaks, etc.)

4. If the second player has an animal with one of those the player says yes. Then the first player will ask if the other player has a specific animal (snake, pelican, etc.)

 For example:

A: Do you have an animal with tusks?

B: Yes, I do.

A: Is it a walrus?

B: Yes, it is. (Give the other player the walrus card.)

5. If the player does not have an animal with that structure or the specific animal they tell the player to go fish.

For example:

A: Do you have an animal with tusks?

B: Yes, I do.

A: Is it a walrus?

B: No, it isn't. Go fish.

To Win: Once all the cards are matched, the person with the most matches wins.

FYI…

What's the difference between antlers and horns?

They are both extensions of the skull plate, but an **antler** is shed every year and grows back. A **horn** does not shed and will not grow back if broken.

What's the difference between tusks and horns?

A horn is an extension of the skull plate, but a tusk is actually a tooth extending out of the animal's mouth.
